TECHNICAL BULLETIN #3521 Acid Foamer

- #3521 Acid Foamer was formulated to create a foam blanket on top of hot sulphuric pickling tanks. It keeps noxious fumes down to make conditions easier to work.
- This product has some cleaning ability and helps shed water for draining of parts. It can be added to hot or cold tanks with no danger, other than splashing.
- Better foaming and pickling will occur at elevated temperatures. Usually 1-2% is enough to show results in hot pickle tanks.
- This product may be used in conjunction with *Howard Supply #850-A* in the caustic cleaning station to keep oil from entering the acid bath.
- Agitation is beneficial to create more foaming and increase efficiency.
- Protective clothing is recommended when handling this product.
